

Simplified Containment – The New Way

With the growing pressures on production and costs, the DEC Group has been listening to the industry.

Everyone in the Pharmaceutical and Chemical Industry has the same problem when it comes to powder handling issues – How to deal with a variety of packs and charge or discharge these safely. From drums to bags, from canisters to containers, there is not just one solution.

Because of this, DEC have been working with a few close customers to re-think this problem. The criteria were low cost, simple and modular solutions using new technology to solve most of the old problems.

By using these new technologies including air control system, closed loop processes and simplified control loops, DEC have developed a range of environmentally friendly systems that

are cost effective and modular meaning that loading and unloading of products using these technologies is both safer and more efficient.

Dec solutions touch on the implications for buildings, planners and process design engineers for future projects and how processing in the future can be done without the need to follow traditional practices creating significant reductions in cost.

Find out more about Dec's efficient containment and other powder handling solutions and visit us at Powtech 2011 in Nuremberg, Germany from Oct. 11-13 Hall 9 – Booth 9-253

We invite you to attend the trade fair.
